

# Sorting

## Comparison-based Sorting ( $\Omega(n \log n)$ )

- Insertion
- Selection
- Merge
- Heap
- Quick

## Sorting for special input patterns

- Counting (i/p is ranged from 0 to k)
- Radix (d digit numbers with each number taking at most k-values)
- Bucket (uniformly distributed)

# Counting Sort

Sort a sequence of integers from the range  $\{0, \dots, k\}$

A 

2	5	3	0	2	3	0	3
---	---	---	---	---	---	---	---

 $k=5$

Count

2 1 0	0	2 1 0	3 2 1 0	0	1 0
0	1	2	3	4	5

2	0	2	3	0	1
0	1	2	3	4	5

B

0	0	2	2	3	3	3	5
---	---	---	---	---	---	---	---

$\Theta(n+k)$

Scan A

Scan Count array

For  $i=1$  to  $k$   
 $C[i] = C[i] + c[i-1]$

For  $i=n$  to 1

$B[UC[A[i]]] = A[i]$

$UC[A[i]] = UC[A[i-1]]$

$\Theta(n+k)$

Stable

In case of same element, o/p order preserves i/p order

# Radix Sort

- $d$ -digit numbers ( $d \rightarrow \text{constant}$ )
- Each digit can take  $k$ -values ( $k = \Theta(n)$ )

$$= E\left[\sum_{j=0}^{n-1} X_{ij} \cdot \sum_{k=0}^{n-1} X_{ik}\right]$$

$$= \sum_{j=0}^{n-1} E[X_{ij}^2] + \sum_{j=0}^{n-1} \sum_{\substack{k=0 \\ k \neq j}}^{n-1} E[X_{ij}] \cdot E[X_{ik}]$$

$$= n \cdot \frac{1}{n} + n(n-1) \cdot \frac{1}{n^2}$$

$$= \left(2 - \frac{1}{n}\right)$$

$$E[X_{ij}^2] = 1^2 \cdot \frac{1}{n} + 0^2 \cdot \left(1 - \frac{1}{n}\right) = \frac{1}{n}$$

$$E[X_{ij}] \cdot E[X_{ik}] = \frac{1}{n} \cdot \frac{1}{n}$$

$j \neq k$ ,  $X_{ij}$  &  $X_{ik}$  are indep

$$= \frac{1}{n^2}$$

# Interesting Problems

Class Test (Next Tuesday)  
Sorting + Order Statistics

1) Sort  $n$  integers in the range  $[1, \dots, n^3]$

Radix Sort  $\rightarrow \Theta(3(n+n))$   
 $\approx \Theta(n)$

$[1, \dots, n^k]$   
 $\approx \Theta(kn)$

- 2) In-place Algo (No extra space)
- 3) Algos efficient for inputs

# comparisons depend on input
